

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

tions of DILLENIUS relate to "subjects so diverse as the investigation of the British Flora, especially that of Wales; the botanical exploration of North America; the botany of the exotics, especially succulents, cultivated in his time; and the classification of cryptogamic plants." The Dillenian herbaria are three: that of the *Synopsis*; that of the *Hortus Ellthamensis*; and that of the *Historia Muscorum*.—J. M. C.

Plant chemistry.—The original papers and addresses on plant chemistry, published by HELEN C. DeS. ABBOTT MICHAEL (*b.* 1857, *d.* 1904), have been collected and reprinted, together with a biographical sketch (110 pp.) and four literary papers, to form a neat volume.³ Mrs. MICHAEL's scientific training was obtained under extraordinary difficulties, and her work was made somewhat scattering by reason of the very alertness and eagerness of her mind. Her contributions to a knowledge of the constituents of plants, especially the glucosides, are more valuable than her theories as to the correlation of plant form and classification with the nature and distribution of chemical compounds. The book in its editing shows some unfamiliarity with scientific names and terms. It is a worthy memorial to one whose work was cut short by an untimely death.—C.R.B.

Flora of Guatemala.—JOHN DONNELL SMITH has published as the eighth part of his *Enumeratio* an index⁴ of the preceding parts. The species are arranged alphabetically, and 7979 numbers are cited, representing 3736 species, 1189 of which are not contained in HEMSLEY's *Biologia Centrali-Americana*. Incorrect determinations and faulty nomenclature are also corrected. The author is to be congratulated on the complete way in which he has investigated the flora of this region and organized his results.—J. M. C.

London botanic gardens.—M. PERRÉDÈS has brought together in a single publication⁵ a series of papers that appeared in the *American Journal of Pharmacy*. The three gardens described are Kew Gardens, The Royal Botanic Society's Gardens in Regent's Park, and The Chelsea Physic Garden. The numerous admirable illustrations that accompany the text make these gardens very real to the reader.—J. M. C.

Pflanzenfamilien.⁶—Parts 227 and 228 contain the completion of the Lembo-phyllaceae, and the presentation of Entodontaceae, Fabroniaceae, Pilotrichaceae, Nematocaeae, and Hookeriaceae, by V. F. BROTERUS. The third part of the
